

## VAP-powder (Vacuum Assistant Process-Powder)

Multi-Functional Vacuum Deposition Device-powder

A vacuum deposition device of plating metal film to granular or powder-based surface

- Evaporation source is adjustable from up to down to vaporize and unfixable granular materials can be plated.
- Vibratile platform can keep the vibration of materials which are plated while turning. For the turning of particles, every side of them can be evenly coated and deposition spots eliminated to a large extent.
- In the case of current vacuum deposition device of customers, this vibratile platform and reverse vaporization crucible are also compatible.

### NaBond Technologies Co., Limited

Head office: 1001, Fourseas building, Nathan Rd, KL, HONG KONG  
Shenzhen office: 402-406, No. 13rd Bldg, Zhongxing Industrial Park,  
Chuangye Rd, Nanshan, Shenzhen, China, 518054

Tel: +86-755-89801091

Fax: +86-755-86058970

## Main components

- High vacuum exhaust device (boosting turbopump + extraction pump)
- Evaporation source
- Monitor
- Test material vibration device

Made in Tsukuba Japan
